

LEED Version 4 (2016)

Thank you for your inquiry concerning the recycled content of our steel conduit products. LEED Version 4 is the current version of LEED. Allied Tube & Conduit manufactures galvanized steel rigid conduit, intermediate metal conduit (IMC), electrical metallic tubing (EMT), and various specialty steel conduit products such as Fire Alarm™ EMT, Blue EMT, Kwik-Fit® EMT and Kwik-Couple® Rigid and IMC.

LEED MR: Construction Waste Management

Unlike other materials, steel contains recycled material and is also fully recyclable. In fact, according to the Steel Recycling Institute (SRI), steel is the world's most recycled material. Therefore, scrap produced during construction is diverted from landfills.

LEED MR: Recycled Content and Regional Materials

According to LEED requirements, mechanical, electrical and plumbing components are included in the calculations for recycled content and regional materials.

Steel conduit is an electrical component. Steel conduit contains considerable recycled content and is fully recyclable. The following information provides details about the recycled content of our steel products.

The US Green Building Council (USGBC) has ruled that average industry values for recycled content may be used for steel products.

According to the Steel Recycling institute, the average industry values for steel are:

Post-Consumer:	25%
Pre Consumer:	0%

MR Credit for regional materials is available within a 100 mile radius from the distribution and/or purchase location and includes all points of manufacture.

For your information, our steel conduit and EMT manufacturing plants are located in Harvey, IL; and Houston, TX.

LEED MR Credit: Material Ingredients Optimization

Allied steel conduit and tubing are compliant with the European Union's REACH program. REACH certifications are available upon request.

Please me if you have any questions regarding this certification.

Very truly yours,

Ruth Ensing
